Name: $\qquad$ Block: $\qquad$

## General

Independent variable is defined as:
Dependent variable is defined as:
The $\mathbf{x}$-axis is the $\qquad$ variable. The $y$-axis is the $\qquad$ variable. What is a slope?

## Graph 1:

| Table 1: Density of Magnesium |  |
| :--- | :--- |
| Mass $(\mathrm{g})$ | Volume $\left(\mathrm{cm}^{3}\right)$ |
| 17 | 10 |
| 34 | 20 |
| 51 | 30 |
| 68 | 40 |
| 85 | 50 |

The equation for this graph is: $y=$
The slope for this graph is:
The independent variable is:
The dependent variable is:
What observations can be made about graph 1:

## Graph 2:

| Table 2: Boyle's Law |  |
| :--- | :--- |
| Pressure <br> (kPa) | Volume $\left(\mathrm{cm}^{3}\right)$ |
| 100 | 500 |
| 150 | 333 |
| 200 | 250 |
| 250 | 200 |
| 300 | 166 |
| 350 | 143 |
| 400 | 125 |
| 450 | 110 |

The independent variable is:
The dependent variable is:
What observations can be made about graph 2:

## Conclusion:

What are the differences in graph 1 \& graph 2:

## Now, read pages 55-57

Graph 1 is known as being $\qquad$ . Which means in simplistic terms that:

Graph 2 is known as being $\qquad$ . Which means in simplistic terms that:

## Practice \#1

| Table 3: Cesium-137 Half- life |  |
| :--- | :--- |
| Amount of sample (kg) | Time (years) |
| 1.00 | 30.2 |
| 0.5 | 60.4 |
| 0.25 | 90.6 |
| 0.125 | 120.8 |
| 0.0625 | 151 |

The independent variable is:
The dependent variable is:
What observations can be made about graph 3:

This is a $\qquad$ graph.

## Practice \#2

| Table 4: Solubiltity of $\mathrm{KClO3}$ |  |
| :--- | :--- |
| Temperature <br> $\left({ }^{\circ} \mathrm{C}\right)$ | Solute per <br> 100 g of $\mathrm{H}_{2} \mathrm{O}$ |
| 0 | 5 |
| 20 | 8 |
| 40 | 15 |
| 60 | 28 |
| 80 | 45 |
| 100 | 60 |

The independent variable is:
The dependent variable is:
What observations can be made about graph 4:

This is a $\qquad$ graph.

## Practice \#3

| Table 5: Charles's Law @ |  |
| :--- | :--- |
| 1atm for 0.1 mole of $\mathrm{H}_{2}(\mathrm{~g})$ |  |$|$| Volume (L) | Temperature <br> $\left({ }^{\circ} \mathrm{C}\right)$ |
| :--- | :--- |
| 2.24 | 0.000 |
| 2.65 | 50.00 |
| 3.06 | 100.0 |
| 3.47 | 150.0 |

The independent variable is:
The dependent variable is:
What observations can be made about graph 5:
This is a $\qquad$ graph.

Graph 4: Solubility of $\mathrm{KClO}_{3}$
Time (years)

Temperature ( ${ }^{\circ} \mathrm{C}$ )
Graph 5: Charles' Law of $\mathrm{H}_{2}(\mathrm{~g})$
